

Innovative Security Solutions

Chemical

Risk management in your environment is a daily challenge. With our expertise and experience, our Chemical Solutions Group is dedicated to helping you design, develop and define strategies to mitigate risk. Security, safety, and **regulatory compliance strategies** allow you to attain secure facilities, uninterrupted production, and safe work environments. This partnership results in a safer, more secure workplace and helps you maintain your standing as a responsible member of the community.

You have risks, we have the expertise.

Program Management

A Program Manager is your main point of contact when implementing your system and is accountable for delivery across all of your locations. This individual becomes expert on your individual security solution. As a result of this attentiveness, they also become our internal expert on your policies, procedures and specifications.

Regulatory Compliance

CFATS, TWIC, MARSEC, MTSA Sarbanes-Oxley, OSHA, VPP Star, Responsible Care and Security Vulnerability Assessment are main drivers in your security systems... we know the requirements and have developed ways to help you stay compliant. Service, Maintenance, and Reporting Service solutions need to be consistent across multiple locations. Your security systems are critical to your success and need to be kept in top condition. Your reporting needs to be concise, accurate, and flexible.

Engineering and Design

We can design a system for you that meets the requirements of multiple facilities. This solution will utilize products that meet the needs of chemical facilities and your compliance requirements.

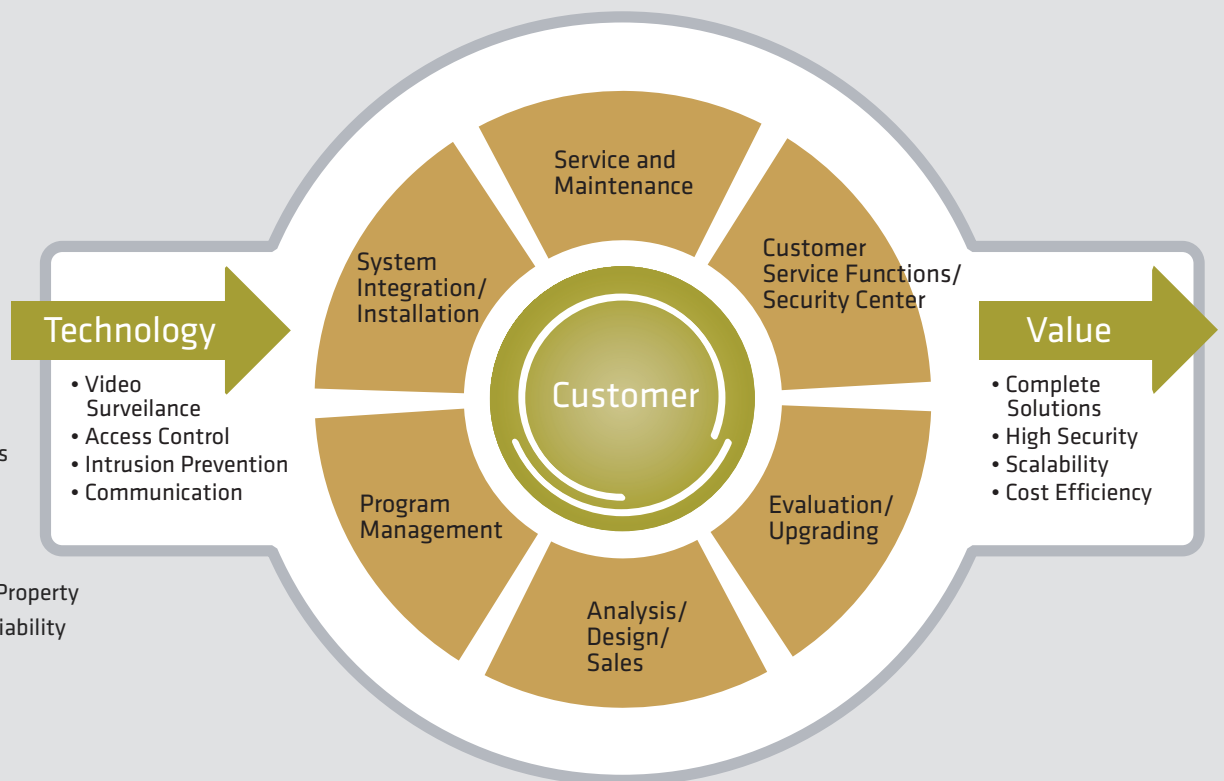

Training

Efficient and complex security solutions require that every level of user, from operator to system administrator, maintain their specific proficiency. Both our standard and customized courses help customers efficiently acquire competence, and maintain this competence as the solution matures.

Confidence you can rely on

Industry Risks:

- Safety
- Non-Compliance
- Process Interruption
- Security Breach
- Data Loss
- Theft
- Terrorism
- Emergency Accountability
- Contractor Fraud
- Corporate Image
- Unauthorized Access
- Product Loss
- HazMat Security
- Pipeline Integrity
- Loss of Intellectual Property
- Security System Reliability

Our IT Support Services

Our in-house IT staff is fully dedicated to the design, implementation and support of your networked security solutions, with long-term industry experience and Microsoft, Cisco, CompTIA and IT certifications. We can supplement the efforts of your IT Department to create a seamless enterprise solution.

Our dedicated Chemical Solutions Division has designed and deployed solutions at Corporate headquarters, Refining and Process Facilities, and Transportation and Distribution Terminals. We have successfully integrated these systems into a centralized approach, while still meeting the needs of your local facilities. We have a clear vision of the future of the industry and have prepared solutions to solve the issues of today and tomorrow.
