

Innovative Security Solutions

Commercial

Niscayah possesses all of the requisite skills, capabilities and experience to achieve superior integration between the variety of systems required to provide security solutions in today's world.

We are committed to creating strategic and innovative solutions that allow our clients to achieve their security objectives. We provide practical and proven systems and services while striving to exceed our customer's expectations. We believe our first responsibility is to our clients.

Project Management

Security Beyond Expectations

Niscayah is skilled at identifying security vulnerabilities and leading the way in creating more intelligent security solutions; integrating sophisticated new technologies; and setting new standards for others to follow. Niscayah begins each project by analyzing our customer's risks and threats with a thorough site survey and vulnerability assessment. We use this investigative data, in conjunction with specific project goals, to develop an overall security program. This leads to design recommendations that are appropriate, actionable, and compatible (when required) with outside entities or pre-existing technologies. Our Systems Integration Group has the experience and the skills to integrate, install and service the latest security technologies with advanced computer networks. These technologies include CCTV, video analytics and surveillance, biometrics, access control systems, perimeter intrusion detection. Properly deployed, an integrated combination of security technologies delivers higher levels of detection, assessment and response.

Niscayah has a proven track record in working with diverse hardware and software platforms, as well as network and communications technologies.

The Niscayah Promise:

- Customer Centric Solutions
- Customer Driven Partnership
- Trusted Technology Partners
- Internal Physical and Logical Security Expertise
- Clear Vision and Focus on the Future
- Industry Leadership
- Strong Management Team
- Financial Strength and Stability
- Employee Friendly Environment

Program Management:

A Program Manager is your main point of contact when implementing your system and is accountable for delivery across a complicated single location or across a multi-site implementation, ensuring a standardized solution from location to location. This main point of contact becomes the communications pivot point for all your systems needs. This individual becomes the subject matter expert on your individual security solution. As a result of this attentiveness, they also become our internal expert on your policies, procedures and specifications. One of the primary duties of this position is to communicate needed information to our delivery teams. Performing in this manner, we become even more than a partner; we actually become a stakeholder in your success.

National Monitoring Center and Customer Care Center:

Provides 24/7 alarm and integrated video monitoring, dispatch services, systems administration, customer reporting, customer help desk, technical support and a full service center for all local and national customers.

National Service Bureau:

Provides 24/7 emergency service support to national customers.

Our IT Support Services:

Our in-house IT staff is fully dedicated to the design, implementation and support of your networked security solutions, with long-term industry experience and Microsoft, Cisco, CompTIA and IT certifications.

Maintenance and Service:

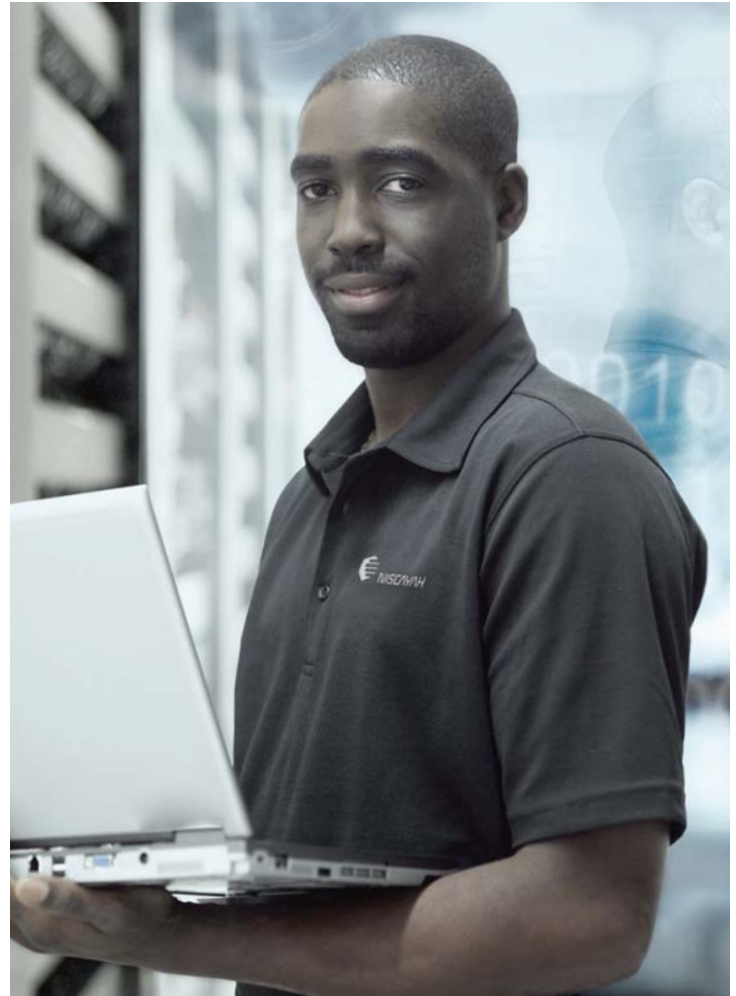

Proper maintenance promotes efficient functioning of any system. Service contracts ensure that a system functions properly and offers expert help quickly in challenging situations. Service Programs are recommended and can be customized based on the size and complexity of the solution and the needs and demands of the customer.

Training:

Efficient and complex security solutions require that every level of user, from operator to system administrator, maintain their specific proficiency. Both our standard and customized courses help customers efficiently acquire competence, and maintain this competence as the solution matures.

Niscayah is an international leader and partner, assisting you in the management of risk and is established throughout the world with a national network of branch offices in the US.

Niscayah In Brief

Niscayah provides complete security solutions for customers based upon their specific needs. With a detailed understanding of our customer's organization, industry, and business drivers, security concepts are organized around the best use and application of technology to reduce our customer's risk posture. This is achieved through the implementation of integrated security systems which include access control, video surveillance, and intrusion systems. Service programs are designed to ensure proper post-implementation maintenance for overall system performance.

Niscayah specializes as a security systems integrator in the design, installation, and support of technology-based solutions. Our customers tend to be large organizations with complex security challenges and varied operating environments.

Niscayah's expertise in access control, video surveillance, and alarms is extensive. We work closely with IT professionals within our customer's organizations to ensure maximum use and productivity of communication, data storage, and data security.
